EDUCATION

University of Maryland

Expected May 2027

B.S. Computer Science and B.A. Psychology | GPA: 3.63/4.00 | Meyerhoff Scholar | President's List and Dean's List

TECHNICAL SKILLS

Languages: TypeScript, Python, JavaScript, SQL

AI & ML: Agent orchestration, tool calling, agent skills, RAG, agent evaluation, AI SDK integration, scikit-learn, TensorFlow, OpenCV

Frameworks & Cloud: React, Next.js, Node.js, Flask, Tauri, Cloudflare Workers/D1, Vercel

Backend & Delivery: PostgreSQL, SQLite, Supabase, REST APIs, OAuth, webhooks, Git, CI/CD

PROFESSIONAL EXPERIENCE

Kora Studio | Founder and Software Engineer

May 2026 - Present

- Founded a software studio and delivered eight client websites and operational systems across healthcare, food service, wellness, and consulting, generating approximately \$7.4K in profit.
- Engineered Next.js/TypeScript applications with PostgreSQL, Supabase, and Cloudflare D1; integrated CRM, booking, and payments through REST APIs and webhooks with validation, rate limiting, and CI/CD.

M&T Bank | Technology Intern

Jun 2025 - Aug 2025

- Co-developed a Python/Flask and React/Vite application that maps document descriptions to ranked retention-code recommendations; presented the tool to internal stakeholders to advance adoption.
- Evaluated TF-IDF and ConceptNet Numberbatch semantic retrieval using cosine similarity, achieving over 80% top-1 accuracy on labeled records.

JUNEBRAIN Inc. | Software Engineering Intern

Jan 2025 - May 2025

- Developed a real-time Python/OpenCV pipeline to localize pupils, estimate 2D gaze, and flag misaligned or low-quality frames for an ophthalmic imaging prototype.
- Adapted GazeML for eye-only TensorFlow 2 inference on NVIDIA Jetson Nano with an engineering mentor; implemented pupil-geometry checks and multi-camera validation.

POETS | Research Intern, Machine Learning

May 2024 - Jul 2024

POETS consortium: Stanford University, University of Arkansas

- Developed a regression pipeline using Monte Carlo optimization data to predict boost-converter power density; compared linear, Bayesian, and tree-based models using validation and test sets.
- Built a command-line tool that accepts voltage, duty cycle, and power requirements and returns predicted power density for candidate switches to support component selection.

University of Maryland DAMS Lab | Undergraduate Researcher

Oct 2024 - Present

- Built Python scraping and local-LLM/NLP workflows to detect changes in smart-IoT privacy policies, automate readability and content analysis, and support research-paper development.

PROJECTS

Kora | Personal AI Assistant

Dec 2025 - Present

github.com/korastudios/Kora

- Built a local-first Windows personal assistant that carries preferences and commitments across conversations, turning requests into persistent tasks and reminders; extended Pi's agent foundation with TypeScript services, SQLite state, and a React/Tauri workspace for reviewing and managing its actions.
- Engineered personal memory with source tracking, correction, forgetting, and hybrid retrieval; built an evaluation harness using simulated users and changing workweek scenarios to assess follow-through, memory retention, authorization, and recovery across restarts.

KS App | Business Operations Platform

May 2026 - Present

- Built a Next.js/TypeScript platform for small-business owners to manage customers, projects, finances, and client portals, with shared services and tenant-scoped permissions in PostgreSQL/Supabase.
- Developed an AI operator with reusable business skills spanning finance, operations, and technical workflows; connected Google Workspace and other services so owners can delegate work across business tools through a conversational interface.

AWARDS

TechBuffalo PowerUpTech Design Challenge - First Place

July 2025

- Led UI/UX and architecture for Seneca Signal's admin dashboard, mobile website, and SMS interface; presented the winning team demo and later demonstrated it at the Microsoft-sponsored TechConnect 2025 AI for Social Good conference.
